

Energy Consumption Report - Test Document

This document is created for testing an AI Knowledge Assistant application. It contains sample information about monthly electricity consumption, costs, and energy efficiency recommendations.

Summary

The building consumed 12,450 kWh of electricity in May 2026. The total electricity cost was 2,180 EUR. Compared to April 2026, energy consumption increased by 8 percent. The main reason for the increase was higher cooling demand during warmer days.

Monthly Data

Month	Consumption (kWh)	Cost (EUR)	Main Driver
March 2026	10,900	1,920	Lighting and heating
April 2026	11,520	2,010	Office equipment
May 2026	12,450	2,180	Cooling demand

Recommendations

The company should monitor cooling usage during peak hours, improve air conditioning scheduling, and replace old lighting systems with LED lighting. These actions could reduce electricity consumption by 5 to 10 percent.
